

GlassPortal Pro

Quickstart Guide · Executive client delivery from Notion

Thank you for purchasing GlassPortal Pro. This guide gets you from zero to a client-ready portal in minutes.

1. Your access

App URL

<https://glassportal.vercel.app>

Open the app, click Sign in, and register with the SAME email you used on Gumroad. After payment, open <https://glassportal.vercel.app/thanks> and check your plan — Pro should unlock automatically within a minute. If it is still Free, click Refresh plan in Studio, or reply to your receipt email.

2. What Pro unlocks

- Remove the GlassPortal mark from live portals and PDF exports
- White-label header for client-facing delivery
- Passcode protection and private client links
- Up to 3 published portals on the Pro plan

3. Connect Notion (5 minutes)

- In Notion: Settings!>Connections!>Develop or manage integrations!>New integration
- Copy the Internal Integration Secret (starts with secret_ or ntn_)
- Open your report page in Notion!>...!>Connect to!>select your integration
- In GlassPortal Studio: paste the Integration Token and the Page URL, then wait for Live Preview

Tip: before connecting, click Load Sample Report to explore themes, branding, and PDF export with demo content.

4. Brand and secure

- Upload the client logo (PNG/JPG/SVG) — used in header, favicon, and share cards
- Set Client Name and Executive Theme (McKinsey Slate / BCG Emerald / Stripe Midnight)
- Enable Simple Passcode for confidential links, or use a Private client link that opens without a passcode
- Customize the VIP Share Card title and confidentiality badge for WeChat / Slack / Email / WhatsApp

5. Publish and share

- Sign in, then click Save & Publish Portal
- Copy the Passcode link or Private client link
- Send the link to your client — they never create an account
- Clients can read, confirm/sign, and export PDF from the portal

6. Notion setup checklist

- Integration created and secret copied

- Target page (and any sub-pages you need) shared with the integration
- Page title is board-ready (it becomes the portal H1)
- Optional: Status / Password properties if you use Notion fields for gating
- Token stored only in your browser — never email secrets to clients

7. Support

Reply to your Gumroad receipt email with: (1) purchase email, (2) Studio sign-in email, (3) short description of the issue. We typically respond within one business day.

Deliver executive portals. Not Notion screenshots.
